SKIMMERS

Water Works Ponds skimmers are amongst the best on the market. Made via a rotomold manufacturing process results in a much stronger product than their injection molded counterparts. The process has a number of design strengths, such as consistent wall thickness and strong outside corners that are virtually stress free. An invaluable feature when considering the harsh frost and temperature conditions of an Alberta winter.

We know that this line of skimmers has fantastic value for our customers because:

- They allow you to choose a vertical filter mat for easy removal or even upgrade to the premier vertical filter brush method
- They have a removable center divider to create two chambers inside. One for filtering the water and the other for inspection and removal of the pump
- They allow you to hide the skimmer at the pond edge with a front flange to place pond rocks to blend in with the rest of the pond
- The one piece debris net is three times heavier than other manufacturers
- The one piece debris net design keeps mesh in place and is easier to clean
- The two chamber design mean not more cutting filter pads to fit around the pump or plumbing
- Inlet port is on outside of skimmer with rock ledge (No pre-cutting of liner required and perfect for hiding the intake from view)

Small Skimmer

Skims ponds up to 1000 gallons

Handles pumps up to 3000 GPH

Dimensions are 20" long, 15" wide, and 19" tall

6" wide water inlet

Available in vertical style pad or filter brushes

(Complete with weir flap, debris net, filter mat, reinforcement bar
bulkhead fitting, male adapter, stone lid)

Medium Skimmer

Skims ponds up to 3000 gallons

Handles pumps up to 6000 GPH

Dimensions are 28" long, 18" wide, and 20" tall

8" wide water inlet

Available in vertical style pad or filter brushes

Can be used with small extension tube

(complete with weir flap, debris net, filter mat, reinforcement bar,
bulkhead fitting, male adapter, stone lid)

Large Skimmer

Skims ponds over 3000 gallons

Handles pumps up to 15000 GPH

Dimensions are 42" long, 20" wide, and 30" tall

16" wide water inlet

Available in vertical style pad or filter brushes

Can be used with small extension tube

(complete with weir flap, debris net, filter mat, reinforcement bar,
bulkhead fitting, male adapter, stone lid)

Hydro Clean Skimmers are manufactured under rotational molding process. This method of manufacture offers superior design advantages over other molding processes, such as injection molding. The process has a number of design strengths, such as consistent wall thickness and strong outside corners that are virtually stress free. These attributes are particularly vital for the harsh frost conditions during an Alberta winter.

The Hydro Clean Piper Skimmer is easy to install and easy to clean. In fact they are favoured by our installation crews as they find them even easier to install. Pre-plumbed for multiple pumps makes installation even easier. Installation of bulkheads are not required. All accessories included, featuring natural looking faux stone lid, fittings,

silicone, stainless steel hardware and premium grade filter brushes.

Hydro clean Skimmers feature high grade filter brushes to provide superior filtration without blocking water flow - even when they're dirty! Filter brushes inside skimmers are much easier to clean than the traditional filter pads found in many pond skimmers on the market today. To clean simply pull out the filter brushes with the support handle and give it a shake or hose it off. The brushes are now clean and your hands stay dry.

Hydro Clean Professional Pond Skimmers have the strongest leaf nets available on the market. A constant flow of water inside the skimmer can be warring on the nets and every year we meet pond owners with inferior leaf nets from other brand skimmers looking for a better solution. The leaf net can be removed without disturbing the filter brushes behind.

The inlet snout attaches to the **outside** of the lined skimmer body to eliminate the guesswork for precutting as in other pond skimmer systems. The inlet is extra long so rocks and gravel can be placed across the intake of the skimmer - hiding it from view! Another reason our pond crew installers prefer these skimmers so much!

A custom designed "rock lip" was designed to a more natural looking means of disguising the top of the skimmer.

The Hydro Clean skimmers are available in two sizes. The high grade Piper skimmer will mechanically filter small and medium scale sized ponds.

The premium Pelican skimmer will mechanically filter large scale sized ponds.

Hydro Clean Piper skimmer features:

- Pump chamber to accommodate multiple pumps up to 6,000 GPH
- Premium filter brush rack
- Strongest heavy duty Stainless Steel and re-enforced nylon leaf net
- 2" interchangeable, pre-plumbed outlet ports for multiple pump/plumbing/overflow options
- Auto fill valve port
- Heavy duty Stainless Steel screws, washers, and nuts
- Separate pump chamber - service pump without removing leaf net
- Industry's heaviest duty construction
- Natural looking faux stone lid
- Inlet port on outside of skimmer with rock ledge (No pre-cutting of liner required and perfect for hiding the intake from view)
- Dimensions are 25" long, 19" wide, and 23" tall

Hydro Clean Pelican skimmer features:

- Pump chamber to accommodate multiple pumps up to 24,000 GPH
- Premium BlackKnight Koi Filter Brushes filter brush rack
- Strongest heavy duty Stainless Steel and re-enforced nylon leaf net
- 3" interchangeable, pre-plumbed outlet ports for multiple pump/plumbing/overflow options (no need for bulkhead fittings that require huge wrenches or Channel Locks to install)
- Auto fill valve port (eliminates the need to drill a port or Auto Fill Valve attachments)
- Heavy duty Stainless Steel screws, washers, and nuts
- Separate pump chamber - service pump without removing leaf net
- Industry's heaviest duty construction
- Natural looking faux stone lid
- Inlet port on outside of skimmer with rock ledge (No pre-cutting of liner required and perfect for hiding the intake from view)
- Dimensions are 30" long, 25" wide, and 34.5" tall
