GET READY FOR WINTER - WITH WATER WORKS PONDS.

The end of summer is time to think ahead about your koi and goldfish during the winter. Should the fish be brought indoors during the winter or left outside in the pond. There are pros and cons for both over wintering methods. The team at WaterWorksPonds will be happy to help determine which option is best for you.

There is currently not a recognized over wintering program for our zone 3 climate. Majority of the information available in magazines or the internet pertains to the milder winter of the Northern United States where majority of the market demand is for winterizing pond equipment. By provincial code most ornamental ponds in Alberta are less than 24 inches deep. Over the years WaterWorksPonds has experimented every winter with varying degrees of success over wintering koi and goldfish outdoors. With trial and error comes experience. First hand experience that you and your pond fish can benefit from.

Contact us today to consider your options.

POND AERATOR KIT

This high quality, continuous duty aeration system is ideal for aerating and circulating the water in your koi holding tank for the winter. This compressor & airstone combined kit is ultra quiet, making ideal for use in your home or garage.

FOUNTAIN SYSTEMS AERATORS

Fountain Systems Aerators help oxygenate pond water which promotes healthier fish and aquatic life. Proper Aeration during the winter season will also help breakdown fish waste and cut a honeycombed hole through ice as it covers the pond. This in turn will release gases poisonous to over wintering fish. The pulling action of the bubble curtain to the surface will also provide better circulation of warmer water at the bottom of the pond.

Specifications of particular interest:

- Oil free for continuous or intermittent use.
- Quiet operation
- Manifold included for a series of airstones.

Model	Cubic In. / Min.	WATTS
P25	1220	25
P45	2440	45
P65	3966	65
P85	5187	85
P125	7628	125

Vinyl Tubing

- 3/16" Interior Diameter clear tubing
- 3/8" Interior Diameter clear tubing

Alumina Airstones

Alumina airstones are three times stronger than white silica airstones! Produces a finer bubble curtain with no increase in pressure.

- Inlet fittings are set into the body of the diffuser, making them much less likely to break or twist loose,
- Self weighting via higher density material,
- Cleanable with muriatic acid or chlorine,
- Resistant to ozone,
- Creates finer bubbles for increased aeration efficiency with no increase in pressure,
- Incredibly durable to provide years of service.

Dimensions Fitting Size

1.5" x 1.5" x 6" 3/8" barb

1.5" x 1.5" x 9" 3/8" barb

1.5" x 1.5" x 12" 3/8" barb

**Autumn / Spring cold weather Koi food
Micro Lift - Cold Weather Food (Wheat Germ)**

In the cold weather during spring and fall when the night-time temperature goes below 13C feed the Cold Weather Formula. When the pond water temperature drops, the koi and goldfish require a highly digestible cool-water diet. The cold water diet is made with lesser amounts of protein but contains wheat germ which is easily digested and also contains a higher level of fat. The pellets will not cloud the water.

Guaranteed Analysis

- Crude Protein - 32%
- Crude Fat - 7%
- Crude Fiber - 5%
